Chapter 6 integumentary system review sheet

ch 6 integumentary system Show image text transcribed 100% (5 reviews)Solution (page 1) Question 1 1) a .epidermis b . Scamous stratified epithelium { Keratinized } 2)Adipose tissue (hypodermis is the deepest layer of skin , also known as subcutaneous regview complete answer The basic structure of the skin 1 of the time date name of the Integumentary system laboratory. Complete the following statements by writing the appropriate word or phrase on the blank row: 1. The surface area of the skin is composed of fabrics (3 words). 2. The deepest fabric in the region is the compound of connective tissue 3. The largest cell in the epidermis is 4. The two primary layers of the dermis are the dermis, consisting of areolar connective tissue, and the dermis, consisting of dense irregular connective tissue. 2. Four skin protective functions are: 3. Using the key, choose all the answers that apply to the following Keya Stratum basale descriptions d. stratum lucidum b. stratum corneum estratum spinosum c. stratum granulosum f. papillary dermis 9. retinal dermis 1. layer of translucent cells in thick skin containing dead keratinocytes 2. two layers containing dead cells 3. dermal layer responsible for fingerprints 4. epidermal layer exhibiting the fastest cell division 5. layer including dead-scale cells, full of keratin, which constantly sloughoff 6. layer called for the numerous granules present 2 position of melanocytes andepithelial cells and area where pre-keratin weblike filaments appear 9. Deep layer of the dermis 10 layer secreting a glycolipid that prevents water loss from the skin 64 Sheet 6 4 Label the structures and areas int and ntary indicated in diagram 5. Label the layers of thick skin epidermis. So, complete the following statements. CCO a. The glands that respond to the increasing levels of androgen are glands. are epidermal cells that play a role in the immune response. c. tactile corpuscles are found in the corpuscle found deep in the dermis. 6. What substance is produced in the skin and plays a role in the absorption of calcium elsewhere in the body? 7. What did the two-point discrimination test prove? The review tab 6 65 questions about the general feeling are placed under Answer each by placing your answer in the regularly numbered approp empty right. 1-2. What two areas of the body tested were more sensitive to contact? 3-4 IIIIIIIII. What two areas of the body tested were the least sensitive to contact? 9. Define the adaptation of sensory receptors 10. Why is it avant Why is it beneficial to have pain receptors that are sensitive to all vigorous stimuli, whether heat, cold or pressure? Pain receptors don't fit. Why is it important? Leather accessories 11. Using the key, answer the following descriptions. (Some answers can be used more than once.) arrector hair follicle sweat glands-apocrine skin receptor sweat nail sweatsebaceous hair key gland: 1. acne is an infection of this structure 2. structure that houses a hair 3. more numerous varieties of sweat glands that is activated by increase of temperature 4. sheath formed by both epithelial and connective tissues 5. type of sweat glands that produces a secretion containing protein and fat in addition to water and salts 6. the smooth muscle that connects the hair follicle to the skin 7. mainly dead/keratinized cells (two answers) 8. specialized nerve ending that responds to environmental stimuli 9. produces a secretion containing fragments of cell 10. "sports" a lunule and a cuticle 12. How does it help your skin adjust body temperature? (Describe two different mechanisms.) 66 review sheet 6 Permitting the distribution of the glands from sweat 13. With what substance in the binding paper reacts iodine painted on the skin? 14. Which skin area - the forearm or palm of the hand-has more sweaty glands? What other areas of the body, if you try, would they try to have a high density of sweat glands? 15. Which organ controls the activity of the eccrine glands? 16. Vitiligo is a disorder in which skin pigmentation is irregular, resulting in white spots. Recent research suggests that vitiligo could be an autoimmune disorder. Which cell would you expect to be more impressed, and why? 17. + Keratinase is an enzyme produced by dermatophytes. What organs of the body should these pathogenic mushrooms tend to proliferate inside, and why? Why?
