Org. jboss. netty jar

are using netty framework in different web applications running on jboss eap. the problem we met when we had a copy of netty. port in every application. war/WEB-INF/lib was that the second application failed to unfold with the following error: warn [org.jboss.deployers.structure.spi.helplers.AbstractDeploymentContext] (principle) can record the implementation mbean org.jboss.netty.internal.LoggerConfigurator javax.management.InstanceAll Use/available. (study) it was not possible to start the service jboss.deployment.unit.\$APPLICATION_NAME_war. install: org.jboss.msc.service. StartException in servicejbas018733: failed to process the install phase of distribution "\$APPLICATION_NAME_war" at org.jboss.as.server.deployment.UnitPhaseService.start(DeploymentUnitPhaseService.java:127) [jboss-as-server-7.2.1.Final-redhat-10.jar:7.2.1

ServiceControllerImpl\$StartTask.start(ServiceControllerImpl.java:1811) [jboss-misc-1.0.4.GA-redhat-1.jar:1.0.4.GA-redhat-1] a org.jboss.msc.service. ServiceControllerImpl\$StartTask.run(ServiceControllerImpl.java:1746) [jboss-misc-1.0.4.GA-redhat-1.jar:1.0.4.GA-redhat-1] to java.util.concurrent.ThreadPoolExecutor.Worker(ThreadPoolExecutor.java:1145) [rt.jar: DuplicateServiceException: service jboss.pojo.*org.jboss.netty.internal.LoggerConfigurator* described is already registered at org.jboss.msc.service. ServiceRegistrationImpl.setInstance(ServiceRegistrationImpl.java:154) [jboss-misc-1.0.4.GA-redhat-1.jar:1.0.4.GA-redhat-1] a org.jboss.msc.service. ServiceControllerImpl\$22install [jboss-misc-1.0.4.GA-redhat-1.jar:1.0.4.GA-redhat-1] a org.jboss.msc.service. ServiceContainerImpl.install(ServiceContainerImpl.java:561) [jboss-misc-1.0.4.GA-redhat-1.jar:1.0.4.GA-redhat-1] a org.jboss.msc.service. ServiceControllerImpl\$ChildServiceTarget.install(ServiceControllerImpl.java:2228) [jboss-misc-1.0.4.GA-redhat-1.jar:1.0.4.GA-redhat-1] a org.jboss.msc.service. ServiceTargetImpl.install(ServiceTargetImpl.java:202) [jboss-misc-1.0.4.GA-redhat-1.jar:1.0.4.GA-redhat-1] a org.jboss.msc.service. ServiceControllerImpl\$ChildServiceTarget.install(ServiceControllerImpl.java:2228) [jboss-misc-1.0.4.GA-redhat-1.jar:1.0.4.GA-redhat-1] [jboss-misc-1.0.4.GA-redhat-1] It was not possible to start the service jboss.deployment.unit.\$APPLICATION_NAME_war. INSTALL: org.jboss.msc.service. StartException in service jboss.deployment.unit.\$APPLICATION_NAME_war. Did not manage to process the INSTALL phase of distribution \$APPLICATION_NAME_war a org.jboss.as.server.deployment.DeploymentUnitPhaseService.start(DeploymentUnitPhaseService.java:172) aa org.jboss.msc.service. ServiceControllerImpl\$StartTask.run(ServiceControllerImpl.java:1955) to java.util.concurrent.ThreadPoolExecutor.runWorker(ThreadPoolExecutor.java:1149) to java.util.concurrent.ThreadPoolExecutor\$Worker.run(748) Caused by: org.jboss.service.service DuplicateServiceException: Service jboss.pojo.*org.jboss.netty.internal.LoggerConfigurator*. Control service to 5 more Why is the EJB resource reference configuration with JNDI throwing over ERROR? This happened because of jboss-beans.xml in netty.jar, which defines a bean org.jboss.netty.internal.LoggerConfigurator. As a solution, I removed the network. Vase from the application, and moved to the lib directory of the JBoss profile - this works well, netty library is available, and JBoss does not try to distribute that bean. However, our developers and architects do not like this solution, as it creates more dependencies than the application on the distribution environment, and all applications would be using the same Netty version - if we need to update Netty due to the requirements of an application later, we must update and test all the applications that use it. My question is: it is possible to "scope" in some way the beans lined up within the context of application, so that you can use a copy of retility. vase inside every application? Class loading should not be a problem, applications use isolated class loaders (via class-loading jboss-web.xml configuration - loader-repository). There is no netty jar file packed in my distribution, but I still see the same error message "DuplicateServiceException: Service jboss.pojo.*org.jboss.netty.internal.LoggerConfigurator*. DESCRIBED is already registered" is thrown when using my application. Red Hat JBoss Enterprise Application Platform (EAP) (EAP) org.jboss.netty.jar. org.jboss.netty.jar download. org/jboss/netty/channel/channelfactory.jar
