If you are looking for a new mobile browser, even the most superficial research will present Google Chrome for Android as the possibility. The Android version of the incredibly popular Google browser performs exactly how they expect. In fact, unless this is the first time that he uses a mobile browser, it is unlikely to surprise you a lot, since Chrome seems to have spent the last few years by consolidating their browser empire rather than develop something new and revolutionary. When he was Google Chrome. First released, it was billed as a light-fast browser that has managed to overcome almost all other apps on the market. In interrupt years, it continued to grow in popularity, but in recent years, it seems to have slowed a little in terms of innovation meanwhile, other browsers have run to recover and the things that have first marked chrome as special are now equally on average .Chrome for Android is no exception. As its desktop-based counterpart, it is light and fast, easy to use and look good. It offers everything we expect from a mobile browser from an excellent download management, bookmarks and easy sharing of accessible customization options and intuitive card management. We are particularly passionate about the arrangement on Chrome for Android. Once logged in, not only can you access your saved information (such as password, history and bookmarks) between devices, but you can also access the cards that you have opened on the other device, which is something that is something Users get used very quickly and rely. It really contributes to a feeling of seamless navigation, which is really what is the whole chrome experience. When it comes to security and privacy, we see one of the areas that Google has not managed to convince everyone. While for casual user security and privacy options seem completed and reassuring, more demanding users have expressed concerns about the amount of data that Google can see, and what, exactly, does it with those data. It is right to emphasize that Google Chrome is not the only app that people complain about this arena, but being one of the largest and much in public eyes, becomes an irresistible goal for many. If you are the practical type to solve your problems, you will find a wealth of help resources for Google Chrome for Android, from the official help documentation to well-populated forums. If you are the kind of person who prefers to intensify their problems to a real person's real person, however, you could wait a little. It is notoriously difficult to talk to a real employee, live Google, and for Chrome for Android users, it's not exception. Where can you run this program? This version of Google Chrome is specifically designed for Android phones. On the Google Chrome homepage, you will be able to find a version for almost all imaginable platforms. Is there a better alternative? The demand for millions of dollars. There is definitely a huge number of alternative browsers for Android but if you consider it or not it is better that is completely enjoyed. Being goals and maintaining the fear of GoogleScare on one side, Google Chrome for Android is definitely one of the best, if not the best. If you are nervous about Google or worried about your privacy, however, you will probably feel that one of the narrow competitors of Chrome is a much better bet. When it comes to security and privacy, let's see one of the areas that Google hasn't have been enough to convince everyone. It is notoriously difficult to talk to a real employee, live Google, and for Chrome for Android users, it's not exception. Google Chrome in all its versions was the undeniable browser king. It is still a great option and a trustworthy if you need a browser for an Android phone. If we look a little less than enthusiasm, however, it is probably because there are 2 small points that steal part of the shine. First of all, Google Chrome for Android (or any other platform, for that matter) does not seem to have innovated or improved a lot in recent years. It could be solid, but it's certainly not exciting. Secondly, it is firmly part of the GoogleVerse. Now, it's worth indicating that there is no evidence we know about what makes this negative, but if you are part of the suspicious team, has definitely taken away a bit of shine.should download it? Sure. If you feel benign on Chrome is part of the Google Vendor, it is a solid and attractive browser that is at least as good as one of the main competitors. For many, especially people who use Chrome on other platforms, is an obvious choice. (Image Image: Shutterstock) Power Android users will now be able to open more cards and search even more quickly in Chrome as Google is now pushing a 64-bit version of your browser on supported smartphones. When the first 64-bit version of Android was released six years ago, the research giant started testing a 64-bit version of Chrome for Android in July of last year. Now, however, users of Android whose devices have been updated to Android 10 and will be able at least 8 GB of RAM to use the new 64-bit version of Chrome.as Google started rolling the 64-bit version of Chrome Users whose smartphones satisfy its requirements, some Android users can already use the updated version of your browser. You can check to see if your browser has already been updated by opening Chrome and typing `Å ¢ Å,~ Å "Chrome: // version"` in the browser address bar. This will make a wealth of different information, including the build that You are using, which Android version you are using and the device data. However, you can easily add if you run Chrome 64-bit as the information will be displayed at the top of the list after the version.Y number using version a 64 bit of Chrome, you will probably experience some performance improvements as a result of better RAM management. Next, Google designs to only allow developers to upgrade 64-bit apps for Google Play Store from August of this year and next year, The latest arm processors only support 64-bit apps. We also presented the best smartphone smartphone msperveruser Android 10 is here - for ID Pixel inspiration, at least. Typically we recommend all updates to the most recent and larger version of an operating system to enjoy its characteristics, its safety patches and bug fixes, but which does not mean that it is not guaranteed to have a perfect experience on Your new os.if you encounter any critical problem in Android 10 (including slowdowns), or you miss the Android 9 familiarity, you can downgrade your device. Although you are probably best holding for any correction, or back up your information and restore the phone to see if this addresses any problem, the nuclear option is still there need. In this guide, he guided you through the process to restore from Android 10 to Android 9. We're doing it on a pixel because what we have (and what has Android 10). This process will be different for other Android devices - if you can even downgrade to everyone "and we will face those in a separate guide once Android 10 is more widely available. Install the Android the Android Using PackageWe Platforms Using the ADB command line item, short for the Android debugging bridge, to downgrade our Google Pixel 3 XL, which means that we need to install the Android SDK platform package before you can Start doing anything. Click on that link, take the installer for Windows or Mac and unzip the contents of a "Your Safe Pick.Make folder that your phone is completely updated, one sounds like a strange step, since we try to run The downgrade of our pixel device, but listen to me. The downgrade does not work if there are updates waiting for pixels. So, to prevent that, pull the settings> System> Advanced> System update and check if something is not available. In this case, download the update, install it and restart the device. From downloading the oldest operating system ImageFor ImageFor Google pixel phones, the company offers a great list of images of the operating system to choose. All I had to do is Status find my device (a 3 xl pixel) and take an image for Android 9.0. As easy as that. In my case, I used the latest Android 9 Image available: 9.0 .0 (PQ3A.190801.002, Aug 2019) Spoiler: actually it was not the correct file to use at all, a fact that I will turn more late this piece. It is around this point where my first downgrade attempt of my device started to go south, and I wanted to leave my initial thoughts here so you can have a complete sense of what to do, and what to do, if you do You following some downgrade indications you saw on the Google site for the first time. Enable the USB debugging order for my computer to talk to my phone on ADB, I also had to enable USB debugging. To do this, pull the settings> Information about the phone, scroll to the bottom to find `Å ¢ Å,~ Å "Build number, Å ¢ Å,~ and touch frantically until the developer options are enabled on the device. Back to back to settings> System> Advanced and removable options. Scroll down to the section Å ¢ Å,~ Å "debugging ¢ Å,~ and enables Å ¢ Å,~ Å "sb debugging.Å ¢ Å,~ spoiler: you would also like to enable Å ¢ Å,~ Å "OEM unlocking ¢ Å,~ while you are here, which I neglected to do until my second downgrade attempt. More about this in a little. Plupp your phone in your Computerasy, right? While you do it, pull up a high command prompt (right-click and select Run as administrator) or terminal. Browse towards the point where you decompressed the Android platform tool package.Reboot your Android and start downgrading (an attempt of one) Spoiler: I thought this was the right process at the beginning. I was wrong. You can read the reason that does not work in this section, or jump to the next section if you are getting antely and just want the downgrade of your device without the extra education. To start, enter the following command to restart your device in its restore mode. (You may have to accept a debug request of your device first, then send the command again.) ADB Restart the recovery when I did this, my device pulled on a scary-looking command Å ¢ Å,~ Å "No command "Screen. To get to the main recovery menu, I must simply hold down the power button, tap the Å ¢ Å,~ Å "Up Volume "button and release the power button. From there, I selected the update Å ¢ Å,~ Å "apply from adbÅ ¢ Å,~ option on my device using the volume buttons and confirmed it using the power button. My pixel then hired this: back on my computer. I executed the following command to start the Android 9 sideloading on my ADB Sideload Crosshatch-OTA-PQ3A.1908.002-13edb921.zippyes, that name of the file is the name of the Android 9 image I downloaded from Google. And, yes, it must be in the same folder as AdbÅ ¢ Å,~ "do not forget to move it there from the default Download folder. Not only could I see a bit of gust of activity on my device: but I also have a small indicator of Advance (a percentage counter) on my command prompt: And then all failed: How to downgrade the device (the successful attempt) suspicion that this method would allow you to update your device without problems, but in reality there are some other steps involved when you try to downgrade your device. First I to restart the phone to its regular status, the development options revisited in the Settings app and enable an option I forgot: OEM release. I then restarted to ADB by typing ADB restarts bootloader in the command prompt. Subsequently, I had to install Google's USB drivers, downloading them, showing them up, pulling up Windows Å "e Device Manager and manually updating the Android Flamato device (by right-clicking, selecting Å ¢ Å,~ "Driver " . Å ¢ Å,~ "and indicating the directory in which I previously decompressed Google's usb drivers). Unplugged my phone and lit back (for good luck, I suppose), and I was able to confirm my system could Seeing it by typing fastboot devices in the command prompt. I downloaded the Android 9 Google factory image for my device - not the OTA image I previously pulled ... and falling into the same folder as my instrument ADB. I felt rather ready at this point. I unlocked the bootloader of my phone by typing flashing fastboot unlocking in the command prompt. This pushed my device to emit a small warning or scary, I ignored; I used the volume buttons to select the new Å ¢ Å,~ Å "unlock the bootloaderÅ ¢ Å,~ option and confirmed using the power button. When the bootloader of my phone was unlocked, I decided the factory image that I previously downloaded directly in my ADB folder, so it's his content were swimming among all the other files. (Do not uncheck to a new folder inside the platform-tool folder.) Finally, I entered the flash-all in my command prompt and crossed your fingers. And ... this is failed, because he said the image was not compatible with my device. Sigh. To work around this problem, I decided to try flashing with a different factory image entirely ... the image of the first Å ¢ Å,~ Å "Crosshatchnet available for my pixel 3 XL, Å ¢ Å,~ Å "9.0 .0 (PD1a.180720.030, Sep 2018). - I deleted the content of the previous image from the folder of my platform-tools, has decompressed the contents of this image in the folder as before and ran flash-all again. And it seemed that things work, since I was getting much more data on the update processing compared to before: after about two minutes, the update is over and my device restarted automatically. With more fingers crossed - I think I was losing the circulation of this point - I pushed my pixel and I have re-restarted it manually into FastBoot mode by holding down the Power and Volume-Down buttons. So I inserted the FastBoot flashing block in the command prompt to lock the backup bootloader (which, again, asked me to select the correct prompt on my phone). Finally, I restart my device a last time by selecting the option Å ¢ Å,~ Å "StartÅ ¢ Å,~ on the fastboot screen (using the ignition button, of course). And ... Great Scott! Å ¢ Å,~ "VIAVING WEA, Å" e has returned to the past. Here is that pixel 3 xl now on Android 9 with the old security update of September 2018: a summary of how (really) downgrade your device makes Account that this long long journey downgrade of my phone could be slightly confused, but I wanted to walk through the process to show you the test steps and mistakes you may need to take when you can do a downgrade on your device - either Pixel, a Samsung or Whatnot. I saw a lot of Å ¢ Å,~ Å "Android Downgrading" Guides that tend to leave a step or two that are absolutely absolutely critical for the equation. Or, worse, they leave you hanging when you follow their steps and find out that the process didn't work for you. Looking like I did it, Hope you intend to level your troubleshooting techniques you should find yourself in the same way. My last checklist of passages for the downgrading of my pixel: Download and install the Android SDK-Tools Packadownload platform and install Google's USB drivers for your fonemake I am sure that the phone is completely updated to developer options e Activate the USB debugging and unlock unlocking release a factory image for your device for any version of Android desires. (The most recent image may not be the optimal choice. Also, do not use an ota image.) Use a command command prompt Terminal to start the device in the FastBoot mode, then unlock the bootload to the factory image command Å ¢ Å,~ Å ¢ Å,~ Å ¢ Å,~ Å "flash-all ¢ Å,~ command to start the bootloader Your device's bootloader of your device when it is so simple to then, right?
