Digimon next order evolution chart

Digivolution (進化 Shinka?, lit. "Evolution") is a term used in the Digimon series. It is a process used by Digimon, monsters that inhabit a parallel universe called the Digital World that spawned from Earth's telecommunications network. Through Digivolution, a Digimon can develop into a more powerful being. Concept Digimon reside in the Earth's various electronic networks as well as in the Digital World. As they are essentiallycomputer data that can download additional data to themselves, which makes them stronger. If they download enough data, Digivolution is triggered. During Digivolution the Digimon's appearance and attributes change, and it becomes significantly stronger than it was before. The resultant form of the Digimon almost always has a different name than the previous. However, the Digimon's consciousness remains unchanged. If a Digimon does not absorb enough data needed to maintain the form, it will not be able to retain that form for long and revert to a lower level in a matter of time. Digivolution is divided into multiple levels, made up of an egg-form Digi-Egg (デジタマ Digtama?) and six main evolutionary steps. Levels are not mentioned in Digimon Fusion and its related media, and most of the Digimon created for the series are specified as having no level in the Digimon Dictionary. Main Digivolutionary Stages (English adaptation terms with Japanese terms in brackets): Fresh (幼年期 I Younenki I?, lit. "Baby I") In-Training (幼年期 II Younenki II?, lit. "Baby II") Rookie (成長期 Seichouki?, lit. "Child") Champion (成熟期 Seijukuki?, lit. "Adult") Ultimate (完全体 Kanzentai?, lit. "Perfect") Mega (究極体 Kyuukyokutai?, lit. "Ultimate") If left to its own devices, Digimon will naturally age and, over time, may digivolve to higher levels using data from the environment. Digivolving from the initial Fresh stage usually progresses, but each subsequent level takes progressively more time. Because of this, only a sparse number of Digimon naturally reach their final forms. Anger and/or the necessity to survive in a great battle can often spur digivolution. When Digimon are deleted, they either regress completely into DigiEggs or break apart into innumerable bits of errant data that can be easily acquired or "loaded" by other Digimon. However, when a Digimon forms a bond with a human, a Digimon may digivolve much more quickly. Using a Digivice, humans can allow a Digimon to instantaneously digivolve to a higher level by sharing their energy. This takes a large amount of energy and cannot happen if the Digimon is weak, injured, or hungry. Digimon who digivolve using a digivice will degenerate, or "De-digivolve", to a lower form after a certain amount of time or if sufficiently injured in a battle. Usually, a partner Digimon's default stage is Rookie; Gatomon from Digimon Adventure being a notable exception, as she naturally digivolved to Champion before meeting her human partner, Kari. However, sufficient injury or energy loss can cause a Digimon to revert an even lower form after naturally digivolving. On top of the regular stages, special forms exist that can only obtained through special methods: Special Stages Armor (アーマー体 Amā-tai?, lit. "Armor Form"), an ancient form of digivolution which only a handful of Digimon are capable of. To gain this form, the Digimon needs to absorb the energy from one of the special Digi-Eggs (デジメンタール Digméntal?). If a Digimon has multiple Digi-Eggs, its digivolved forms become progressively more powerful. An Armor Digimon's power is similar to that of a Champion's and were often equated as such in the card game. Later versions of the card game outright stated that they were the same. They are also considered equivalent to Ultimates in Digimon World DS and Digimon World Dawn and Dusk. Hybrid (ハイブリッド体 Haiburiddo-tai?, lit. "Hybrid Form") is a special level which is related to the Spirits of the Legendary Warriors; by merging with one or more of the Spirits, someone can turn into a special Digimon of this level. Human Hybrid is a form that transforms a human or digimon into a more bestial-looking Digimon, whose power rivals that of a Champion. To attain this, one requires the H Spirit of one of the Ten Legendary Warriors. Human Hybrids were treated as equivalent to Champions in Digital Monster Card Game and became Champions inDigital Monster Card Game α. Beast Hybrid is a form that transforms a human or digimon into a more bestial-looking Digimon, whose power rivals that of a Ultimate's. To attain this, one requires the B Spirit of one of the Ten Legendary Warriors. Beast Hybrids were treated as equivalent to Ultimates in Digital Monster Card Game and became Ultimates in Digital Monster Card Game α. Fusion Hybrid, also known as Fusion Form (融合形態 Yuugoukeitai?), is a powerful form, achieved using both an H-Spirit and B-Spirit. Fusion Hybrids were treated as equivalent to Megas in Digital Monster Card Game and became Megas in Digital Monster Card Game α. Unified Hybrid, also known as Transcend Form (超越形態 Chōetsusukeitai?), uses five H-Spirits and five B-Spirits, combining to give a human or digimon an incredibly advanced and powerful form. Unified Hybrids were treated as equivalent to Megas in Digital Monster Card Game and became Megas in Digital Monster Card Game α. Burst Mode: Shown so far only in Digimon Data Squad and Digimon Masters, Burst is "the power that exceeds Mega," though it may just be similar to a mode change where digimon of a certain level transform to attain greater power such as Imperialdramon Dragon Mode. A Burst Digimon retains a similarity to their original form but has new attacks and a clear increase in power. It is its own special level in Digimon Masters. Super Ultimate (超究極体 Chō Kyuukyokutai?), also known as the "Ultra" level, is a level even higher than Mega. Its existence was a major focus of Digimon Adventure V-Tamer 01. Only a few Digimon are at this level, and many times they are just classified as Mega for convenience. The Korean version of Digimon Masters uses this level for Digimon beyond Mega. In all Digimon series, a Digimon will usually shout out its type of Digivolution immediately before Digivolving and then shout out its new name immediately after. Examples include: "Agumon digivolve to... Geymon (Agumon shinka! Geymon)!" and "Imperialdramon mode change to... Fighter Mode (Imperialdramon Mode Change! Fighter Mode)!" Though Digivolution is named after the theory of evolution, it is more similar to metamorphosis, though there is also an element of aging involved, as seen in the Japanese stage terms. Effects of Digivolution When a Digimon reaches its next level of evolution, its appearance may resemble its previous form or it can have no relationship to it at all, such as Gatomon, who resembles a cat, digivolving to Angewomon, an Angel Digimon. Usually, with the case of digivolution to the Champion level, the resultant Digimon is larger than the previous form, but digivolution to the Ultimate level can often cause the Digimon to refine its strength and decrease its size at the same time, such as (e.g. Togemon to Lillymon). The same circumstances can arrive with Mega Digivolution, such asMetalGreymon to WarGreymon. Forms of Digivolution Digivolution (進化 Shinka?, lit. "Evolution") is one of a Digimon's special abilities. Digivolution is part of a Digimon's natural life cycle, with Digimon digivolving to stronger forms as a result of age and experience. Not all Digimon may undergo it, but it can happen naturally. As they gain data, skills or effect of a Digivice they will be transported into a Digivolution zone where they slowly Digivolve into champions. They may gain armor and/or clothes and when Digimon digivolve they will become a lot stronger than all of the rookies. Digimon can only stay in their Champion Digivolution until their energy or data drops to zero. In the dubbed version of Digimon Adventure and its sequel, regular Digivolution is accompanied by a sound reminiscent of a dial-up phone Internet connection, possibly to signify how they download data to become stronger. In Digimon Tamers it is more difficult to trigger Digivolution in partner Digimon. In this universe, the ultimate source of Digivolution for every Digimon is Calumon, a Digimon created by the Digital World's gods, the Digimon Sovereigns, to put the power of Digivolution in a space small enough so that it couldn't be detected by the malicious computer program D-Reaper. Azulongmon Explains It All A Digimon's Tamer must swipe a Digivolution card[1] into their D-Power Digivice as an activator for Calumon to give them Digivolution energy. To digivolve to the Ultimate level, a partner Digimon is sent the energy of a Blue Card via the D-Power, as well as being given some of Calumon's energy. In Digimon Data Squad a human partner evokes D.N.A. within themselves. D.N.A. is a manifestation of a human partner's emotions that they can send to their Digimon to prompt evolution. Some non-partnered Digimon feed off the negative thoughts of people to evolve in this series. The call is "D.N.A., Charge!". In each series it is possible for a swarm of Fresh or In-Training Digimon to combine into one Digimon of a higher level. As this method of evolution produces a Digimon with one consciousness it cannot be considered a type of DNA Digivolution. Super Evolution / Matrix Evolution / Perfect Evolution / Warp Digivolution Super Evolve (超進化 Chou Shinka?) is the Japanese term for when a Digimon evolves from its Champion stage to its Ultimate form. However, in the English dub of the first two seasons, this process is not given a unique term and was simply called Digivolution. This same term is also used in Digimon Fusion to describe temporary Digivolution or Digivolution at will, such as Shoutmon's digivolution to OmegaShoutmon and MetalGreymon's digivolution toZekeGreymon. In Digimon Adventure, the power of a Crest is required. At first, it requires the DigiDestined to display the trait of their Crest (e.g. Taichi "Tai" Kamiya has to show courage, or Sora Takenouchi, love) in order to achieve Ultimate. Afterwards, it is easier to digivolve to Ultimate, but the main activation required an enormous display of the trait in question. Incorrectly displaying that trait results in Dark Digivolution. However towards the end of Digimon Adventure 02, the original eight Digimon are able to digivolve into their Ultimate forms using the power of Azulongmon'sDigiCore. In the Japanese version of Digimon Tamers, both the Champion-to-Ultimate and Rookie-to-Mega progression are proceeded with the words Matrix Evolution. However, only with the latter is the phrase exclaimed by the human partner. In the English adaptation, only evolution to Ultimate is referred to asMatrix Digivolution, the latter referred to asBiomerging. Champion-to-Ultimate Matrix Digivolution is triggered through the aforementioned examples of Calumon and the Blue Cards. In Digimon Data Squad, Perfect Evolution is a method used by the members of DATS to evoke a stronger version of the D.N.A. and evolve their Digimon partner to its Ultimate form. It can be used to digivolve to a Champion stage, or used on a Rookie and have it digivolve straight to Ultimate. The term Warp Digivolve is used in the English Dub for the evolution from Rookie to Ultimate. The call is "D.N.A., Full Charge!". There is no prefix used here either. Mega Digivolution Mega Digivolution (究極進化 Kyuukyoku Shinka?, lit. "Ultimate Evolution") is used only by Paldramon in Digimon Adventure 02. Like Tamers, this series has the Digimon Sovereigns, though only Azulongmon appears here. Azulongmon shares the energy of a DigiCore with the Adventure 02 partner Digimon, a ball of powerful energy that catalyzes Digivolution in a similar way to what Calumon does in Tamers. Combining the power of their Digivices with that of Azulongmon, the other Digimon who were at the In-Training level at the time digivolve to Rookies, but the Ultimate-level Paldramon, who is fighting a losing battle against Mummymon and aTriceramon at the time, is given the ability to Mega Digivolve, digivolving him to Imperialdramon Dragon Mode. Dramon Power DegenerationEdit Degeneration (退化 Taika?), or De-Digivolution, is the opposite of Digivolution. In this process, a Digimon reverts to a lower form; this usually occurs when they lose enough of their data, either through losing battles or simply consuming a temporary boost of energy. In the anime, a Digimon that has used up all the energy from a temporary digivolution will generally de-digivolve further depending on how high of a form they had been using; Champion to Rookie, Ultimate to In-Training, and Mega to Fresh. As the Digimon used the higher form more often, they would acclimate to it and not fall so far when it expired. In the Digimon Story games, the protagonist can have their Digimon degenerate in order to increase their total Aptitude, as well as to reset their levels and allow them to restart stat-grinding, or to choose an alternate Digivolution path. In addition, the Mystic Energy forces nearly all of the Digimon citizens of CiTY to degenerate to Digi-Eggs when it attacks and steals their data. [1]This section of the article is a stub. You can help by expanding it. Special Types of Digivolutions Dark Digivolution Dark Digivolution (暗黒進化 Ankoku Shinka?, lit. "Dark Evolution") is a corrupt form of regular Digivolution, usually resulting in an evil digimon. A Digimon dark digivolves when someone coerces it to digivolve forcefully, with a mind clouded with anger, or through dark power. A Digimon digivolved through this method is evil and perceives nothing but its urges to destroy, making it very dangerous. In Digimon Adventure, Taichi "Tai" Kamiya pressures his partnerGreymon to digivolve to his Ultimate stage, resulting in SkullGreymon. The Arrival of SkullGreymon Greymon dark digivolves to SkullGreymon again The Emperor's New Home and then into a virus version ofMetalGreymon The Captive Digimon in Digimon Adventure 02 as a result of the Digimon Emperor's Dark Ring, Dark Spiral, and his black D-3. InDigimon Tamers, Takato Matsuki, enraged by the death of Jeri's partner, Leomon, wills WarGrowlmon to become Megidramon, a Digimon so viciously powerful it threatens the entire Digital World, unleashing the power of the Digital Hazard symbol on its chest. Lionheart in Digimon Data Squad, Marcus's rage towards Thomas's defection caused ShineGreymon to transform into his Ruin Mode. Kurata's Real Plan in Digimon Next, Barbaomon's infusion of dark energy combined with MagnaAngemon's negative thoughts force a dark digivolution to Mummukusmon Anti-God Devices Digimon Twint!, and when Barbaomon's Commandments murders Trailmon, an enraged Yuu causes Gaomon to digivolve to BlackGaagamon The Other Sagel. Shou Kahara's use of the Dark Area and the Dark Digsaw to digivolve Peckmon to Crowsmon is also a form of Dark Digivolution. The Girl No! in Digimon Xros Wars, Shademon's larva's Digivolution after being fed with hearts of despair is also a Dark Digivolution.Xros Miracle! Reel in a Silver of Hope!![2] Armor Digivolution Armor Digivolution (アーマー進化 Amā Shinka?, lit. "Armor Evolution") is the fusion of a Digimon with a Digi-Egg (デジメンタル Digméntal?, "Digméntal"). It is featured in Digimon Adventure 02. It is an ancient form of Digivolution that was developed when the Digital World was young and it was almost impossible to digivolve even to the Champion level without assistance. It is later used in Digimon Adventure 02, when the Digimon Emperor's D-3 and the presence of Control Spires prevent Digimon from Digivolving to the Champion level. A DigiDestined activates Armor Digivolution by shouting, "Digi-Armor Energize!" or "Digméntal Up!". In the English dub, a golden Digi-Egg is activated by shouting "Golden Armor Energize!" DNA Digivolution DNA Digivolution (ジノグレス進化 Jōguresu Shinka?, lit. "Jogres Evolution") is a method of Digivolution first used in the English dub of Our War Gamel, and later in Digimon Adventure 02. The name "Jogres" is a portmanteau of the words "Joint" and "Progress". DNA Digivolution allows two Digimon to combine into one Digimon of a higher level. The two original Digimon consciousnesses join into one, and the combined Digimon can speak with both voices—often simultaneously. In Digimon Adventure 02, Gatomon's tail ring, in the possession of Gennai, gives the partner Digimon the power to DNA DigivolveA Million Points of Light. There is also a sub-form of DNA Digivolving seen in the dub ofRevenge of Diaboromon called Warp DNA Digivolution. Using it, two Rookie-level Digimon can skip Digivolving to the required stage for combining and go straight to the DNA Digivolved form. Agumon and Gabumon are the only ones to have used this, becoming Omnimon without Warp Digivolving to WarGreymon and MetalGarurumon. Digimon known to use DNA Digivolving in the anime series are: Digimon known to use DNA Digivolving in Digimon Adventure V-Tamer 01 are: Digimon known to use DNA Digivolution in The Wonderswan Games are: Digimon known to use DNA Digivolution in Digimon Xros Wars (manga) are: Starmon and the Pickmons to ShootingStarmon. The Japanese term for DNA Digivolution, Jogres Evolution, is a portmanteau of the words "joint" and "progress." DNA Digivolution is handled differently in most video games. Digivolution World 2, Digimon Adventure 02: Tag Tamers,Digimon Adventure 02: D-1 Tamers, and Digimon World Dawn and Dusk follow a different method. DNA Digivolving two digimon together will permanently fuse them into one new Digimon with increased stats, sometimes forming a new one but other times not. Digimon Tamers: Brave Tamer features Calumon cards which provide DNA Digivolution function two Digimon who are equipped with them. It provides in-battle DNA Digivolution. The combined Digimon will be the next Digivolution stage of the Digimon who has the lower digivolutionary level or, if the digivolutionary levels are the same, the who initiates the DNA Digivolution. Warp Digivolution / Ultimate Evolution / Double Warp Digivolution Warp Digivolution (ワープ進化 Wāpu Shinka?, lit. "Warp Evolution") is a digivolution process where a Digimon can reach a higher level directly bypassing any intermittent phases. Notable Digimon who have used this, although only implicitly in some cases, are Agumon,Gabumon, Leomon, Angemon, Keramon, Lopmon, and Impmon. In few cases, particularly Agumon, Gabumon, and Angemon, they do not actually bypass any intermittent phases—they simply go through it very quickly. This is shown by Agumon and Gabumon having their Champion and Ultimate forms appear during their respective Warp Digivolution, andMagnaAngemon appears briefly when Angemon warp digivolves to Seraphymon. In Digimon Tamers, Impmon gains the ability to warp digivolve to Beelzemon Motorcycle Madness, though it is never actually called Warp Digivolution in the series. In Digimon Data Squad, it is called Ultimate Evolution; with enough D.N.A., a Digimon can evolve straight from Rookie to Mega, much like Warp Digivolution from the first two seasons. However, during evolution, the Digimon simply uses the term shinka without any prefix. The call is "D.N.A., Charge! Overdrive!". In the English dub, this is called "Double Warp Digivolution", and while this is functionally identical to standard Warp Digivolution there is one subtle difference; during Warp Digivolution the intermittent phases of the Digimon are shown, but during Double Warp Digivolution all intermittent phases are skipped and not shown at all. Mode Change A Mode Change (モード・チェンジ Mōdo Chenji?) occurs when a Digimon becomes a different version of its current species. The new mode is usually more powerful than the previous. Digimon known to Mode Change are: Warp DNA Digivolution Warp DNA Digivolution is used in the English version of the second Adventure 02 movie, Revenge of Diaboromon. Agumon and Gabumon DNA digivolve together directly into Omnimon. Biomerge Digivolution Biomerge Digivolution, or simply just Biomerge (マトリックス・エボリューションMotorikkusu Eboryōshon?, lit. "Matrix Evolution") is used only in Digimon Tamers. It is a form of Warp Digivolution similar to DNA Digivolution and Digifuse, in that a partner Digimon merges with its human Tamer to rocket to the Mega level. Like DNA Digivolution and Digifuse, the Digivolution is unlocked as a result of the components, in this case the Digimon and their Tamer, being united in a single overriding goal, and yet the original consciousnesses still exist independently within the resultant Digimon on a spiritual level. In a Biomerge, this is represented as the human Tamer lying nude within his or her partner, surrounded by a bubble of light named the Tamer Ball (ティーマー・ボール Teimā Bōru?).[3][4] Unlike DNA Digivolution and Digifuse, Biomerge Digivolution can normally only be performed in the Digital World, where both the human and Digimon components are composed of data, but in Digimon Tamers is rectified when Dobermondelivers power from the Digimon Sovereigns to be used as an interface. The Messenger Within the fiction, the four Digimon shown to have biomerged are indicated to be quite powerful, even for their Mega level. A Tamer activates Biomerging by commanding, "Biomerge Activate!" in the English dub. In the Japanese version, the term Matrix Evolution was used both for evolution to Ultimate and Biomerging. Tamers and Digimon known to use Biomerging in the anime are: Shining Digivolution Shining Digivolution is Calumon's attack. In Digimon Tamers, when Calumon releases all of his Digivolution energy, he causes every Digimon in the Digital World to digivolve to Mega. Janyu's Ark it is called the "Light of Digivolution" in Digimon World DS. Pseudo-Evolution Pseudo-Evolution (ぎょ進化 Gijī Shinka?) is what Akhiko Kurata terms the process he uses to evolve Gizumon into Gizumon-AT and then Gizumon-XT, with the use of an artificial D.N.A. There is no official term for the process in the English version. Bio-Hybrid Digivolution Bio-Hybrid Digivolution (ハイバー・バイオ・エボリューション Haipā Baio Eboryōshon?, lit. "Hyper Bio Evolution") is used Digimon Data Squad. It enables Kouki Tsubasa, Nanami, and Ivan to become their first Digimon forms, based on threeArmor Digimon. However, the resulting forms are far more powerful than regular Armor types. This type of digivolution caused by injecting a Digimon's scattered data in Gizumon into a human body, so the data can merge into human's D.N.A. and when the D.N.A. is released the Digimon form can take over human body and merge powers (human and Digimon). When the Digivolution is completed, the Digimon data reverts back into a Digi-Egg and leaves the human body, and the human cannot evolve into a Digimon again unless re-injected.[citation needed] The call is "Bio Hybrid D.N.A. Charge". The Bio-Hybrids first forms are: Kouki to BioThunderbirdmon Nanami to BioSteegomon Hyper Bio Extra Evolution (ハイバー・バイオ・エクストラ・エボリューション Haipā Baio Ekusutora Eboryōshon?) is used inData Squad. Hyper Bio Extra evolution caused by Akhiko Kurata re-inject more powerful digimon data into Kouki, Ivan, and Nanami using data gathered from Gizumon-AT and Gizumon-XT. This power is very dangerous because if the human body cannot contain the digimon data, they also are killed. However, these three overcome this situation and receive mega power from Digimon. The call is "Bio Hybrid D.N.A. Full Charge". The Bio-Hybrids new forms are: Nanami to BioRotosmon Ivan to BioSupinomon Kouki to BioDarkdramon Burst Evolution Burst Evolution (バースト・エボリューション Bāsuto Eboryōshon?) is used in Digimon Data Squad and in Digimon Next. In Data Squad, it is a Mode Change, it enables a Mega Digimon to reach its Burst Mode, an even more-powerful form. The call is "Charge! D.N.A. Burst Mode!" in English, and "Charge! Digsoul Burst!" in Japanese.ShineGreymon, MirageGaagamon, Rosemon, Ravemon, and BanchoLeomon have all managed to get to Burst Mode. In the series finale, Agumon achieves a form resembling Burst Mode, with energy surrounding his body, but it is never confirmed to be a Burst Mode level. In Next, it is simply a way to digivolve to Mega in the absence of a Digivice; however, it quickly consumes the tamer's life-force, and is dangerous to use. It is invoked by calling out "Burst Charge!". Sho Kahara uses it to digivolvePeckmon to Ravemon Death Struggle: Three Commanders!, while Yu Inui attempts the same to get out of a bad situation so that Tsurugi Tatsuno can continue on. Anti-God Devices Digimon Twint! X Evolution A unique type of digivolution when a digimon comes in contact with the X Antibody, and becomes an upgraded version of itself, most of the time with new, stronger attacks, and a different appearance. Death-X Evolution Digivolution through death, where DexDorugamon, DexDorGreymon and DexDorGuramon digivolve when they die to get to higher forms. Blast Digivolution Blast Digivolution appears in Digimon World 3. When a Digimon fills its Digivolution Gauge by taking damage from the enemy or using certain items, the Digimon will digivolve into one stage past its current highest natural digivolution; for example, a level 4 Guilmon will digivolve to Growlmon, but a level 5 Guilmon will digivolve toWarGrowlmon, as it can already naturally digivolve to Growlmon. The Digivolve Disk item in Digimon World DS has an effect similar to Blast Digivolution. [2]This section of the article is a stub. You can help by expanding it==Spirit EvolutionEdit== These Digivolutions only appear in Digimon Frontier. They refer exclusively to when a someone uses a Spirit to digivolve into a Digimon. Spirit Evolution Spirit Evolution (スピリット・エボリューション Supiritto Eboryōshon?) categorizes the use of a Spirit to digivolve. Spirit Evolution results in a Human Hybrid, a humanoid Digimon, or a Beast Hybrid, which produces a Digimon more similar to an animal but not necessarily devoid of humanoid features. The DigiDestined must release a ring of their own Fractal Code (called Digidice in the Japanese version), hold the Digivice and scan it. The Japanese version of Frontier refers to both types of evolution as Spirit Evolution, while in the English version, the call is "Execute! Spirit Evolution!" for Human Spirits and "Execute! Beast Spirit Evolution!" for Beast Spirits. Slide Evolution Slide Evolution (スライド・エボリューション Suraido Eboryōshon?) is a form of evolution that does not actually push a Digimon to a higher level, like Mode Change. It is primarily a way for a Hybrid Digimon to switch back and forth between its Human and Beast forms, such as Grumblemon to Giasmon Can't Keep a Grumblemon Down, but it is also commonly used by non-Hybrid Digimon to switch between its pure and evil forms, such asMnemon to WaruMnemonzaemon. Island of Misfit Boys Fusion Evolution Fusion Evolution (ダブル・スピリット・エボリューション Daburu Supiritto Eboryōshon?), "Double Spirit Evolution") is the merging of a Human and Beast spirit of the same element to a "Fusion Form" (融合形態 Yuugou Keitai?), a Digimon that has twice the power than what a single Human or Beast spirit can carry. Only two of theDigiDestined, Takuya Kanbara and Koji Minamoto, use Fusion Evolution in Frontier. The appearance of a Fusion Hybrid Digimon can vary, but in the case of Takuya to Aidamon and Koji to BeoWolfmon, they are literally a mixture of features of their respective Human and Beast counterparts. In the English dub, Takuya's call is "Execute. Now! Fusion Evolution!" and Koji's is just "Execute! Fusion Evolution!". Unified Spirit Evolution Unified Spirit Evolution (ハイバー・スピリット・エボリューション Haipā Supiritto Eboryōshon?, lit. "Hyper Spirit Evolution") is an evolution where in the person evolving uses ten of the twenty Spirits to evolve to a "Transcendent Form" (超越形態 Chōetsu Keitai?), Takuya Kanbara and Koji Minamoto are the only children to evolve in this way. Takuya uses the Spirits of Flame, Wind, Ice, Earth, and Woodto become EmperorGreymon, and Koji takes the Spirits of Light, Thunder,Darkness, Water, and Steel to digivolve into MagnaGarurumon. The Spirits of the other children are returned to them when EmperorGreymon and MagnaGarurumon revert to Takuya and Koji. In the English dub, their call is "Unity! Execute! Unified Spirit Evolution!". Ancient Spirit Evolution Ancient Spirit Evolution (エンシェント・スピリット・エボリューション Enshento Eboryōshon?) is the most powerful evolution in Digimon Frontier. All of the Legendary Warrior spirits combine at once to form Susanoomon, the most powerful Digimon obtained through a spirit. Susanoomon appears twice in Frontier; first Takuya Kanbara and Koji Minamoto evolve into him Lucemon on the Loose and then in the final battle of the series all the DigiDestined, except Koichi Kimura, combine to form him. End of the Line In the English dub, The first call is "Ancient Spirits Unite!", while the second one is "Execute! Ancient Spirit Evolution!". DigiFuseEdit DigiFuse (デジクロス DejīKurosu?), lit. "DigiXros") is a form of Digivolution that is central to the plot of Digimon Fusion. It is similar to DNA Digivolution, in that it involves multiple Digivolution, here known as "DigiXros Units", combining into stronger forms, but also involves attributes of Mode Changing, allowing the Units to rearrange their data and become body-parts or weapons for the new form. The gestalt entity is usually controlled by the Unit with the most powerful soul, but especially for Dark DigiFuses, the lead Unit can change if one member's soul overpowers the others. DigiFusing can only be achieved using a Fusion Loader held by its chosen "General" Mikey Goes To Another World!, and most powerful DigiFuses require the "core" Unit to have the mental fortitude to support the unity of the gestalt. Showdown in Shaky Town! So far, the largest DigiFuses involve seven Units, with certain groups, such as the Starmons orPawnChessmons, being treated as one Unit. The Darkness Loader, on the other hand, allows the "Dark DigiFuse" (強制デジクロス Kyousei DigiKurosu?, lit. "Forced Digifuse" where the participants aren't necessarily willing. Disaster in the Dust Zone! There are higher "forms" of DigiFuse, although the distinctions seems to be more in name than in effect. "Double Xros"(ダブルクロス Daburu Kurosu?) is a type of DigiFuse performed between two Generals. Don't Die Greymon!! The Birth of Shoutmon DX Within the DigiQuartz, a Fusion Loader can only DigiFuse two of a Hunter's Digimon together, so Hunters must instead use Double Xros to combine up to four Digimon. A Targeted Taiki! The Super-Celebrity's Warranty! The Double Xros can be further empowered through a "Grand Xros"(グランドクロス Gurando Kurosu?), although this only involves adding more of the current Generals' Digimon. Xros Alliance!! The Final Odaiba Showdown!! When Christopher finally opens his heart to Mikey and Nene, they become able to perform the "Great Xros"(グレートクロス Gurēto Kurosu?), which invoes three or more Generals operating in harmony. A Mighty Love! Deckerdramon's Last Cry!! With a multitude of Generals, it is possible to form an "Evolution Xros"(エヴォリューションクロス Evoryōshon Kurosu?) of multiple Warp Evolved Digimon. Xros Stars!! Like a Shooting Star!! However, the ultimate form of DigiFuse is the "Final Xros", which is enabled with the help of the Code Crown; it allowed Mikey to combine Shoutmon with all of his allies and nearly every Digimon in the Digital World. A Glorious DigiXros, Seize It! Our Future!! Generals can disengage a DigiFuse through "Disengage Fuse"(クロスオープン Kurosu Opun?, lit. "Xros Open") Rumble in the Jungle Zone!, and a Dark DigiFuse through "Forced Xros Open" (強制クロスオープン Kyousei Kurosu Opun?). Xros Miracle! Reel in a Silver of Hope!
